

## Memorandum

Date : September 29, 1995

OCT 02 1995

To : Lester

From : Steve 

Subject: Usefulness of Interim North Delta Program Elements

After reviewing Stein's September 21 status memo on INDP elements, it is my judgement that the following elements may be useful to our program:

1. Wildlife habitat studies
2. Biological Assessment
3. Flood Analysis
4. Perhaps SWP and Delta Modeling - we would have to review the scope in detail
5. Fisheries
6. Jurisdictional Wetlands Delineation - in Tier 1
7. Dredged Materials Environmental Study - in Tier 2
8. Study area mapping - in Tier 2
9. Design studies - perhaps in Tier 2
10. Seepage monitoring - Tier 2
11. Sedimentation and Scour monitoring - Tier 2
12. Borrow materials, mitigation, and enhancement planning - Perhaps in Tier 1
13. Land management coordination - perhaps in Tier 2
14. Fisheries mitigation and enhancement activities - perhaps in Tier 2

We need to review the data produced to date and decide how best to incorporate it in our planning effort. It appears that all but possibly the fish screen modeling out to be an independent effort of DWR. We will continue to try to work out an acceptable fish screen testing program that can get the support of the CALFED agency family.
